

The Neptune Declaration on Seafarer Wellbeing and Crew Change

Overcoming the Seafarer Crisis: Enabling Crew Changes and Repatriation

The Covid-19 pandemic has created an unprecedented crew change crisis which has led to hundreds of thousands of seafarers being impacted and in many instances left stranded on ships¹, beyond the expiry of their contracts. Despite significant efforts by international organizations, governments, industry associations, labor unions, NGOs and individual companies including the adoption on 1 December 2020 by the UN General Assembly of a resolution on *International cooperation to address challenges faced by seafarers as a result of the COVID-19 pandemic to support global supply chains*², the issue is still far from resolved.

This is not an acceptable way to treat seafarers, who are the frontline workers of the maritime industry carrying 90% of global trade. Fatigue after extended periods at sea has significant consequences on the physical and mental wellbeing of seafarers. It also increases the risk of maritime incidents and environmental disasters, and poses a wider threat to the integrity of global supply chains, which depend on safe and reliable maritime transport.

This is why a taskforce of stakeholders from across the maritime value chain has identified the following key issues preventing crew changes, that require urgent action:

- While high-quality health protocols have been adopted internationally, they have not been consistently implemented in practice. This has led authorities to perceive seafarers as a Covid-19 risk, which has limited the possibilities of crew changes.
- Implementing high-quality crew change protocols will reduce the economic risk of disrupted supply chains but will lead to increased short-term costs.
- The disruption of international air travel has reduced the number of flights, causing connectivity issues between major crew change hubs and major seafaring nations, which has complicated crew changeovers.

Taking action to deliver on our shared responsibility

We, the signatories to The Neptune Declaration on Seafarer Wellbeing and Crew Change, recognize that we have a shared responsibility to ensure that the current crew change crisis is resolved as soon as possible and to use the learnings from the crisis as an opportunity to build a more resilient maritime supply chain.

We believe that the most effective way of addressing the crew change challenge and building a more resilient maritime logistics chain, is by working together across the value chain with industry stakeholders, organizations and with governments to implement solutions that work in practice.

Therefore, we commit to take action to resolve the crew change crisis, based on our position and role in the value-chain, thereby ensuring the rights and wellbeing of the seafarers supporting global supply chains. We call on our peers and other stakeholders, in particular relevant government bodies, to join us in our efforts.

1 http://www.ilo.org/global/about-the-ilo/newsroom/news/WCMS_755390/lang--en/index.htm

2 <https://www.undocs.org/en/A/75/L.37>

To make tangible improvements, the following actions should be implemented:

- **Recognize seafarers as key workers and give them priority access to Covid-19 vaccines**

Seafarers should be recognized as key workers by all governments in line with the UN General Assembly resolution adopted on 1 December 2020 and the transition of seafarers across borders should be facilitated based on internationally agreed, high-quality health protocols.

Governments and other stakeholders should work together with the maritime industry to ensure that seafarers, irrespective of their nationality, get priority access to Covid-19 vaccines alongside other key workers and health care professionals in recognition of their critical role in global supply chains and trade. This should include developing protocols that ensure vaccinations are correctly certified and effectively administered to seafarers as well as establishing a standardized format for health passes that contain tamper proof information about vaccination and testing status to facilitate crew changes.

- **Establish and implement gold standard health protocols based on existing best practice**

The maritime industry and governments should implement *The Recommended Framework of Protocols for ensuring safe ship crew changes and travel during the Coronavirus (COVID-19) pandemic*³ which has been recognized by the International Maritime Organization.

To minimize the risk of Covid-19, to build trust that crew changes can be carried out in a safe manner, and to ensure that the measures taken can be universally accepted, the implementation of the Framework of Protocols should be based on the highest practicable standards. The STAR Crew Change Protocols⁴, which are based on existing best practice, are thus recommended for industry-wide adoption.

- **Increase collaboration between ship operators and charterers to facilitate crew changes**⁵

Facilitating crew changes based on high-quality health protocols is a shared responsibility which will create benefits for all by minimizing the risk of Covid-19 spread on vessels, minimizing the risk of disruptions to global supply chains, while contributing to maritime safety and the wellbeing of seafarers.

Ship owners and charterers should share relevant information transparently and collaborate to ensure that necessary crew changes can be carried out with the least impact possible in terms of cost and delays. The owner should provide the charterer with as much notice as possible on intended crew changes, while the charterer should make all reasonable efforts to accommodate crew changes including when the vessel has to make a reasonable deviation.

No charter contracts should contain clauses preventing necessary crew changes from being carried out, as the aggregate effect of such clauses could be a serious obstacle to the safe operation of maritime trade and the protection of the wellbeing and rights of seafarers.

By implementing high-quality health protocols, ship owners can reduce the risk of trade disruption due to Covid-19, which also creates benefits to charterers. These benefits should be reflected in chartering decisions to create incentives for shipowners to implement high-quality health protocols and be transparent about actions taken as well as costs incurred.

- **Ensure air connectivity between key maritime hubs for seafarers**

The aviation industry should work together with the maritime industry to ensure that airlift capacity is established between major crew changing hubs and seafaring nations.

Additionally, the aviation and maritime industries as well as governments – involving all relevant ministries and agencies – should work together to establish a universally accepted and harmonized framework of standards for the validation of trusted health data for seafarers to facilitate border crossing and ensure the long-term resilience of air connectivity.

3 The reference is to the latest version of the Protocols, last updated on 22nd April 2021: [MSC.1-Circ.1636 - Industry Recommended Framework Of Protocols For Ensuring Safe Ship Crew Changes And Travel.pdf](https://www.imo.org/publications/2021/04/22/msc.1-circ.1636-industry-recommended-framework-of-protocols-for-ensuring-safe-ship-crew-changes-and-travel) (imo.org)
